## **DETAILED ACTION**

### ***Allowable Subject Matter***

1. Claims 23-37 and 41-43 are allowed.
2. The following is an examiner's statement of reasons for allowance: Please see the "Applicant Arguments/Remarks Made in an Amendment" filed September 29, 2009, the allowable subject matter noted in the previous office action filed April 29, 2009, and below.

Claim 23 recites a process for the balanced charging of a lithium ion or lithium polymer battery comprised of a series of  $n$  different cells, with  $n > 2$ , each cell being comprised of elements mounted in parallel, said process comprising the steps of: continuously providing, from an onset of a charging operation of the battery and throughout the charging operation, a surveillance of levels of charge of the different cells; carrying out, as a function of the surveillance of said charge levels, one of i) a uniform supply of all the cells, and ii) a balancing of said charge levels of said cells by supplying said cells in a differentiated manner as a function of said cell's current levels of charge; triggering for each cell of the battery, one cell after another cell in a sequential manner, for a fractional portion of the total charge time of the battery, sequences comprising a refreshed evaluation of the level of the charge of the cell in question, followed, as a function of the cell's level of charge and with respect to all the levels of charge of the other cells of the battery, a uniform or differentiated supply, according to a repeating cycle throughout the charging operation; and executing, from the beginning of the charging operation, the following operations under the management of a digital processing unit: A) evaluation of the quantity of energy stored in each cell by measuring

Art Unit: 2858

a parameter indicative of said quantity; B) comparative analysis of the different evaluated quantities of energy or of the different values of the measured parameter for each cell; C) determination of the cell tardiest to charge and of the cell or cells the most advanced in charging; and D) supplying the different cells in one of i) a uniform manner and ii) with the limitation of charging current for the cells other than the tardiest or for the cell or cells most advanced in charging, by derivation of all or a portion of said current at a limited level; with a sequential repetition of the operations A), B), C), and D) obtaining one of i) an end condition of charge of the battery and ii) a detection of a fault, of a dysfunction or an exceeding of an admissible threshold value.

The prior art of record does not disclose the above limitation, nor would it be obvious to modify the art in such a manner.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
